

Microsoft Email Ingestion

The Challenge

Thousands of companies have recognised the benefit of migrating to Microsoft 365 Email but for many companies migrating into one of Microsoft global Cloud facilities can be a long and painful process. The main challenge for customers that have remote branches that need to synchronise into Cloud is the effect distance (latency) has on the time to synchronise email frustrating IT departments and email users.

“We we’re able to reduce synchronisation time into 365 by 90% with Aritari” Microsoft
365 Customer

The Solution

Aritari provide an easy to deploy software that helps organisations move large amounts of data in shorter periods of time. Our ability is driven by overcoming some of the inherent shortcomings of TCP IP whether transferring over a private network or the Internet.

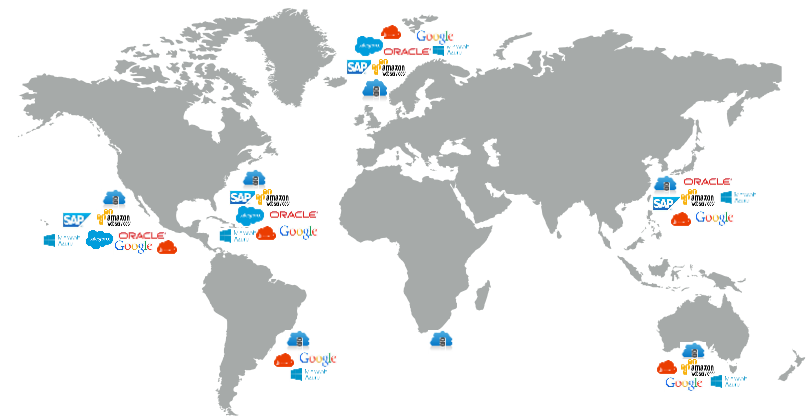

- Increase transfer window size by up to 2000%
- Remove negative effects of packet loss with forward error correction
- Delivered over your own Internet or private network in days

Customers that have used Aritari to synchronise email into the Cloud retain the software to improve overall email delivery and user performance. Our non-intrusive and affordable software delivers improved application performance for all your critical services including OneDrive, SharePoint, Dev, business applications etc.

Any 365 Location Globally

Connect to our Global Gateways in days

Aritari has deployed global Gateways close to your chosen application provider on five continents to ensure seamless and fast integration for your IT projects.
